PRESS RELEASE | Paris, France, September 21st, 2021

ARKAMYS SoundStage Classic is now available on Skyworks Si479xx Car Radio Tuners

ARKAMYS integrated its SoundStage Classic into the Skyworks Si479xx family of car radio tuners, a product line acquired by Skyworks Solutions, Inc. (Skyworks), in July 2021 from Silicon Laboratories. The integrated solution provides cutting-edge audio features at the lowest system BOM with short time-to-market.

Improved audio functionality for Entry and Mid-range automotive radios and Infotainment systems

Skyworks' family of Si479xx radio tuners are widely deployed globally. SoundStage Classic provides exceptional audio features with a set of sophisticated software algorithms. With the integration of Arkamys' SoundStage Classic algorithms into the Skyworks Si479xx radio tuner, the superior audio functionality found in high-end premium cars is now available to a wider range of automobiles utilizing the same proven and cost-effective radio/audio system.

Rapid time-to-market and capability to customize the audio system

SoundStage Classic algorithms were integrated with Skyworks' audio development tools. Automotive Tier ones can use the same audio development tools to customize the audio system per specific car OEM needs. Skyworks Si479xx radio tuners with SoundStage Classic are already in production in several car models.

"Our industry-leading Si479xx automotive radio tuners coupled with Arkamys' SoundStage Classic enable mainstream vehicles to offer the kind of advanced audio experience typically found only in luxury cars" said Juan Revilla, Skyworks' VP and GM of Broadcast products. "We are excited to partner with Arkamys to enhance the radio and audio experience for drivers and passengers alike."

"We are very pleased about this new partnership with Skyworks. This hardware/software complementarity is the response to a growing demand from the market and we are happy to meet it together" said Guillaume Luiggi, ARKAMYS CEO. "Now, our customers will enjoy an optimal in-vehicle audio and radio experience. ARKAMYS strongly believes in the success of the collaboration with Skyworks to meet current and future OEMs' expectations."

ABOUT ARKAMYS *A leader in audio signal processing, ARKAMYS creates innovative software solutions for the automotive and is recognized for its expertise in 3D sound and audio rendering. The company develops innovative solutions to optimize audio quality and spatialization in car cabins. ARKAMYS' solutions equip 1 in 2 vehicles of the volume carmakers in Europe and continues to expand worldwide by working with manufacturers such as Renault-Nissan, Stellantis, Škoda, Hyundai-Kia Motors, Chery, Dongfeng, GAC, NIO, SAIC Motor, Mahindra, Chang'an, Geely, or Dongfeng Nissan.*
