

Arkamys and Telechips Forge New Path in Software Audio with Strategic Collaboration at CES24

Las Vegas, January 10, 2023- At this year's CES24, Arkamys, a leader in audio signal processing, is excited to announce a significant collaboration with Telechips, a top SoC company in Korea and one of major semiconductor suppliers to OEM. This partnership, aimed at using Telechips' Dolphin 5 platform to maximize audio performance, marks a significant stride in automotive audio solutions.

Telechips, known for supplying entry and mid-level cars and major global OEMs, aligns with Arkamys to meet the market's needs. This collaboration is set to streamline audio integration in vehicles, reducing time to market and generating OEM leads and audio proofs of concept (PoCs).

"We're thrilled to work with Telechips, harnessing their SoC expertise to amplify our audio solutions," said Pierre-Yves Delpech, Global Semiconductor Lead of Arkamys. "This partnership is about bringing technical feasibility, anticipation of market needs, and agility to our customers. Together, we are ready to support future OEMs and PoCs' needs for compatibility requests between Arkamys and Telechips."

The technical feasibility of Arkamys' software solutions with Telechips' hardware products has been established, laying the groundwork for the next generation of automotive audio platforms. Arkamys and Telechips are committed to providing advanced solutions that adapt to specific market requirements.

From January 9 through January 12, visitors to CES24 can experience the innovative union of Arkamys and Telechips. While both companies will have separate booths, Arkamys invites attendees to its booth, CP10, for an immersive demonstration of this pioneering audio technology.

###

About Arkamys: Arkamys is a global leader in audio signal processing. With innovative audio software solutions implemented in over 90 million cars worldwide, Arkamys is renowned for its 3D sound and audio rendering expertise, providing high-quality in-cabin audio and spatial enhancement solutions. Arkamys continues to drive forward new audio technologies, gaining increased recognition over its 25-year history, serving half of Europe's largest car manufacturers.

About Telechips: Telechips stands out globally as a fabless semiconductor leader specializing in automotive connectivity and multimedia technologies. Driven by a vision to innovate for the future, the company excels in developing Intelligent Automotive Solutions. Their offerings encompass comprehensive chipset solutions, development environments, and hardware design references, underpinned by advanced security features and low-power technology, adhering to automotive safety standards (ISO26262), cyber security for automotive supply chain (TISAX) and Automotive SPICE (Software Process Improvement and Capability dEtermination).
